SUMMARY

Full-stack developer and AI automation specialist with 5+ years of experience building client websites, internal portals, dashboards, APIs, and workflow systems for operations, education, finance, coaching, and service-based teams. Delivers React, Next.js, TypeScript, Node.js, Nest.js, Prisma, PHP, Laravel, MySQL, Supabase, Redis, and Docker solutions, then extends them with n8n, Retell AI, GoHighLevel, Make.com, Zapier, MCP, RAG, and AI orchestration to automate onboarding, communications, reporting, support, and lead workflows.

Core Focus: Full-stack web development, AI automation, Workflow orchestration, Dashboards and portals, REST API integrations, Nest.js and Prisma, n8n, Retell AI, GoHighLevel, MCP, RAG, AI agents.

SKILLS

Frontend & UI: React, Next.js, TypeScript, JavaScript ES6+, HTML5, CSS3, jQuery, Tailwind, Bootstrap, shadcn/ui, Responsive UI, Accessibility
Backend & Data: Node.js, Nest.js, Express, PHP, Laravel, Prisma, Composer, MySQL, PostgreSQL / Supabase, Firebase, REST APIs, Authentication, Middleware, Query optimization, System architecture
Automation & AI: n8n, GoHighLevel, Make.com, Zapier, Retell AI, AI agents, AI Orchestration, MCP, RAG, Prompt engineering, CRM automation, Voice AI, Email automation
DevOps, Tools & Design: Git, GitHub, Docker, Redis, Upstash, Lovable, Onspace, atoms.dev, Vercel, Netlify, InfinityFree, FileZilla, Figma, Canva, Branding Kit Creation, CLI, Caching, Scalability design, Debugging, Documentation

EXPERIENCE

Full-Stack Developer & AI Automation Specialist 2026 - Present
Independent / Freelance

Builds full-stack web platforms, dashboards, portals, client websites, and API-connected systems with React, Next.js, TypeScript, Node.js, Nest.js, Prisma, PHP, Laravel, MySQL, Supabase, Redis, and Docker, while handling authentication, caching, deployment, integrations, and AI automation workflows across n8n, Retell AI, GoHighLevel, Make.com, Zapier, MCP, RAG, and agent-driven business processes. This work combines product delivery, backend architecture, and automation design so teams can run faster with fewer repetitive manual tasks.

Full Stack Tech/Developer & AI Automation 2025 - 2026
United States of America

Delivered GoHighLevel websites, funnels, landing pages, automation systems, AI integrations, and third-party API connections for client-facing operations, while providing technical troubleshooting, platform maintenance, and workflow support that improved lead handling, follow-up consistency, and day-to-day digital infrastructure. The role blended development and operations support to keep marketing systems, CRM workflows, and customer communication moving reliably.

Full-Stack Web Developer 2024 - 2025
Perth, Western Australia

Built dynamic PHP and MySQL web applications with HTML, CSS, JavaScript, and jQuery, covering backend business logic, relational data structures, CRUD workflows, deployment tasks, production fixes, and ongoing maintenance for live operational systems that required reliability and practical long-term support. The work emphasized dependable feature delivery, stable releases, and hands-on support for real business use cases.

Frontend Developer 2023 - 2024
Milton, NSW, Australia

Created responsive frontend interfaces with HTML5, CSS3, JavaScript, and jQuery, connected UI components to backend APIs and data sources, and improved browser behavior, layout responsiveness, and usability across web applications used in day-to-day operations. This included translating functional requirements into clear screens that were easier for users to navigate and maintain.

Freelance Technical Specialist - Account Recovery 2020 - 2022
Freelance

Provided account recovery troubleshooting and user security guidance for compromised or inaccessible accounts, helping users navigate login recovery, password hygiene, phishing awareness, and practical risk reduction across common online platforms. The work required careful communication, trust-building, and step-by-step problem solving during high-friction support situations.

Content Writer - Cybersecurity & IT Tutorials 2019 - 2020
Whitehat PH

Produced cybersecurity and IT tutorial content that turned technical concepts into clear educational material for beginners learning digital safety, troubleshooting practices, ethical hacking basics, and foundational information security topics. This strengthened documentation, knowledge transfer, and the ability to explain technical ideas in a practical, accessible way.

JONAS VIRAY

Full Stack Developer & AI Automation Specialist

CORE KNOWLEDGE

Responsive design, API integration, Performance optimization, REST API development, Authentication (JWT, OAuth), Middleware, Server architecture, File handling, API security, Rate limiting, Logging, Query optimization, Prompt engineering, Embeddings, RAG, AI agents, AI Orchestration, MCP, Containers, Caching, Input validation, Environment variables, CLI, Scalability design, Debugging ability, Documentation, Communication, Project management.

PROJECTS

CEO Dashboard: Multi-role business operations dashboard for executive reporting, communication analytics, schedules, integrations, and daily workflow visibility in one authenticated system. It supports both leadership oversight and day-to-day operational coordination.

Clara AI: Secure onboarding and login experience for an AI-powered coaching platform that supports personalized programs, guided access, and connected business workflows. The interface is designed to keep entry, access, and user flow management clear and efficient.

Atimonan Laundry Shop: Service website built to present laundry offerings, streamline booking inquiries, and improve online visibility for a local wash-and-fold business. It helps translate a traditional local service into a cleaner digital customer experience.

EquityDeals: Real estate investment platform designed to showcase discounted property opportunities, support buyer engagement, and help investors discover portfolio growth options. The experience is aimed at making deal discovery and investor outreach more direct and actionable.

Innov8IT: Modern IT services website positioned around done-for-you web development, automation, and scalable technical systems for growing businesses. It communicates a clear service offer for companies needing execution rather than in-house technical overhead.

We Breathe Success: Coaching and mentorship platform for entrepreneurs and leaders, built to communicate programs, events, and transformation-focused business support. The site is structured to guide visitors from brand story into offers, programs, and action steps.

Rebirthing You: Faith-centered coaching and wellness platform created to guide women through healing, life transitions, and community-based or one-on-one support programs. It balances emotional storytelling with clear program presentation and conversion flow.

CroftMoney: Finance website focused on home loans, refinancing, and property investment guidance, supported by tools and service content for Australian clients. The experience is built to make complex finance services feel clearer and more approachable online.

Pure Frequency Co: Wellness platform designed to present burnout recovery, nervous system support, and holistic services through a calm and conversion-focused digital experience. The presentation supports trust-building while keeping the wellness offer easy to explore.

Interactive Valentine's Website: Interactive microsite built as a personalized storytelling experience that uses simple web interactions to deliver an emotional and memorable message. It shows how lightweight front-end work can still create a strong personal user experience.

Lens Legacy Portfolio: Photography portfolio website created to showcase event work, visual storytelling, and booking-oriented content in a refined presentation. The layout emphasizes imagery, trust, and easy service discovery for potential clients.

Indeas Portfolio: Educational portfolio site organized to present industrial design concepts, visual work, and field-specific information through a clean user experience. It supports both informational reading and visual exploration of the subject matter.

NEXDI portfolio: Interactive university virtual tour experience that presents colleges, facilities, and institutional identity in an accessible digital format. The project focuses on structured navigation and broad campus information delivery.

Artisans Portfolio: Creative portfolio that combines filmmaking and digital illustration work to showcase visual storytelling, artistic range, and multimedia presentation. It highlights cross-medium creativity while keeping the browsing flow straightforward.

Netspeak: Professional ESL teaching hub website built to highlight workspace infrastructure, teacher support, career growth, and community-driven operations. The platform is designed to communicate both reliability and long-term value for educators.

Netspeak Portal: Internal teacher portal with authenticated access, performance tracking, and day-to-day operational visibility through a centralized dashboard experience. It supports staff accountability and reporting within the broader Netspeak ecosystem.

US Fund Advisor: US Fund Advisor is an AI-powered business funding platform that analyzes a company's financial profile and matches it with tailored financing options, helping entrepreneurs quickly access capital without complex applications or upfront costs.

AUTOMATION & AI WORKFLOWS

Henry Project Manager: Automation system that coordinates tasks, updates, and team communication across tools so project execution stays visible and organized with less manual follow-up. It helps centralize operational movement across project delivery channels.

Daily Weather Update: Scheduled workflow that pulls weather data and delivers daily updates through connected channels to provide reliable forecasts without manual checking. The flow is designed for consistency, timeliness, and hands-off delivery.

Social Media Auto Posting: Content distribution workflow that schedules and publishes posts automatically to keep brand channels active with less repetitive manual work. It reduces routine publishing overhead while supporting steady visibility.

Onboarding Automation: Onboarding workflow that automates account setup, communication steps, and task progression so new users or clients move through activation more smoothly. The system is aimed at lowering friction during the first-use experience.

Automatic Job Application System: Automation system that sources job opportunities, submits applications, and tracks responses to reduce repetitive effort and improve application throughput. It keeps the process more scalable and organized across multiple application stages.

Clara AI: AI-powered messaging and lead-handling workflow that automates conversations, engagement, and business support actions across connected platforms. It is built to keep response handling faster and more consistent for operations teams.

Facebook Ads Data Live Report: Live reporting workflow that collects Facebook Ads metrics automatically and surfaces campaign performance for faster decision-making and optimization. It reduces reporting lag and improves access to current campaign data.

Full Email Automation AI system: AI-driven email workflow that manages sending, replies, follow-ups, and segmentation to support communication efficiency and conversion-focused outreach. The automation is designed to keep email activity active without constant manual supervision.

Retell Automation: Customer-facing AI voice agent for real estate property management that answers calls, handles common tenant or prospect questions, and routes conversations efficiently. It improves response coverage while reducing missed-call dependency on staff.

n8n Email Nurturing: Post-registration email nurturing workflow that guides onboarding, feature education, and early user activation without manual outreach. It supports stronger retention by extending communication beyond the initial signup moment.

Automated Laundry Booking & Notification System: This automation uses n8n to handle laundry service events via a webhook, routing different booking statuses such as booked, pickup, ready, and delivery through conditional logic. Based on the event type, it sends automated emails to customers, admins, and staff, including AI-generated personalized messages for confirmations and status updates. It streamlines communication and operations across the entire laundry workflow from booking to delivery.

Dashboard Subscription Campaign: This project is an automated user engagement and reactivation workflow built in n8n, designed to intelligently target and nurture users based on their account status. The system runs on a scheduled trigger and retrieves user data from a headless CMS (Strapi) via API. It filters users who either have not connected their bank account (via Plaid) or are still on a freemium plan. Using conditional logic, the workflow segments users into specific groups and dynamically selects the appropriate email template. Each user then receives a personalized email with dynamic content injection, such as first-name replacement, encouraging them to complete key onboarding steps or upgrade their subscription. The workflow also handles pagination and batching to process large datasets efficiently for stronger scalability and performance.
